PGE input

- within PGE all non fixed objects are free moving
 - only circles (and springs) can be free moving at present
- we can interfere with circles by adding an impulse
- so we could
 - push it left with the left mouse button
 - push it right with the right mouse button
 - up with the middle mouse button

PGE input

```
def mouse_hit (e):
    global m
    mouse = pge.pyg_to_unit_coord (e.pos)
    if e.button == 1:
        m.put_xvel (gb.get_xvel ()-0.3)
    elif e.button == 3:
        m.put_xvel (gb.get_xvel ()+0.3)
    elif gb.moving_towards (mouse[0], mouse[1]):
        pos = m.get_unit_coord ()
        # print ''mouse ='', mouse, ''ball ='', pos
        m.apply_impulse (pge.sub_coord (mouse, pos), 0.4)
    else:
        m.put_yvel (m.get_yvel ()+0.4)
```

PGE input

- in the main function we register the mouse event with our function
- pge.register_handler (mouse_hit, [MOUSEBUTTONDOWN])
- please see the implementation of breakout to see how this is integrated into a game

- referring again to the
- notice that the section of code containing delete_me and box_of

```
def delete_me (o, e):
    global blocks, winner, loser

blocks.remove (o)
    o.rm ()
    if blocks == []:
        if not loser:
            winner = True
            pge.text (0.2, 0.3, 'Winner'', white, 100, 1)
            pge.at_time (4.0, finish_game)

def box_of (pos, width, height, color):
    global blocks

blocks += [pge.box (pos[0], pos[1], width, height, color)\
            .fix ().on_collision (delete_me)]
```

- the function box_of creates a blue box at pos with a width and height
- it also stipulates that this box is fixed
- furthermore if anything hit this box then the function delete_me is called

- the function delete_me is a call back registered by the call to on_collision (described on the previous slide)
- this call back must be defined taking two parameters
 - the first, o, is the object whose callback is being called
 - the second, e, is the collision event which has describes the collision
- by using the event, e, it is possible to find out the other object in collision and other properties (if necessary)
