Tutorial

- attempt to modify your touchmap.py file and add a worldspawn button
- change cellback to call an indirect function empty_cell_click
 - this should be a global variable which is initialised at the beginning of the module
 - it should default to creating a wall from an empty space
 - it should be changed by the worldspawn button to call a worldspawn character into the cell_array
 - see if you can make this new function generate a worldspawn tile
